

Feverish

RPG Project Documentation

By Kaelynn Amodia

INTRODUCTION

A child named Lilith, who has just been freshly turned into a vampire, wakes up on a cruise ship. With no memory of her past life and no recollection of how she has turned, she explores the ship and uncovers the truth about the people on it. [LINK TO GAME](#)

WORLD CONTEXT

The story takes place on a high-class, luxurious cruise ship, seemingly tailored for the enjoyment of its human guests. From the outside, the ship appears as any other cruise, promising a week of relaxation and leisure amidst the azure expanse of the ocean. Yet, behind this facade lies a sinister truth. The ship is not merely a vacation for humans, but a gathering ground for a secret society of vampires.

Concealed within the exquisite amenities, there is a hidden agenda orchestrated by an Order of vampires, who oversee the ship's operations. While the humans revel in their temporary sanctuary, they are unwilling participants in a vampiric ritual. Behind the scenes, the vampires silently observe the human guests, studying their habits, assessing their suitability for a darker purpose. This cruise is not merely a vacation, but a strategic hunting ground. They meticulously select their prey, choosing those who deemed worthy to satisfy their hunger on the final night of the voyage.

Amidst all of this, the Head Countess plays a pivotal role. While the other vampires focus on selecting their next meal, the Countess observes for succession, seeking an heir to carry on her legacy within the Order.

Thus, a deadly game of cat and mouse unfolds, where humans are but lambs led to the slaughter of the vampires. And as the final night approaches, the stage is set for a chilling climax, where secrets will be revealed, destinies will be decided, and the true nature of the cruise ship's dark purpose will be unveiled.

MECHANICS

Variables:

- FEVER
- HEALTH

Throughout the story, the player must keep track of their health and fever points. They start with 100 HEALTH and 0 FEVER. The meaning of FEVER is not to be understood until later, so the player must be wise about which options they choose. Depending on the choices they make, they may lose HEALTH or gain FEVER. Future choices also depend on their stats.

In the end, FEVER determines the endings, while HEALTH determines what actions are available. If your health is too low, some actions may not be available to you. There are choices within the story that will help you regain health. The player may also choose to acquire different endings depending on how many FEVER points they have gained.

ITEMS

- scissors
- key
- Alice (character)

Some paths throughout the story are locked depending on what is in the player's inventory. Scissors are used to attack enemies. The key is required to open up a door. Alice plays a pivotal role in the acquiring of fever/health. She is not exactly an item, but considered an addition to the "party," helpful to unlock routes that will help the player gain points. Choosing to ignore Alice will ultimately end in only the BAD ending. Choosing to befriend Alice will get the player enough fever points to acquire the GOOD ending. Choosing to attack Alice will give the player a chance to gain the maximum amount of fever points to acquire the TRUE ending.

ABOUT THIS PROJECT

As I was brainstorming ideas for my project, I initially wanted to create simple, fully functioning mini-game that was cute and aesthetically pleasing. It was to be an idle-rpg, where players can sit back and relax. As time went on and through learning many things in this class, I wanted to expand more on my narrative and creative writing ability, and I decided to create a world/interactive narrative story instead. I took a small part of the initial scope I had and expanded upon it to create an immersive interactive story that will engage players.
